

BNP PARIBAS' NET-ZERO COMMITMENTS AND TRAJECTORY: WHERE DO WE STAND?

In order to support the transition to a low-carbon economy, BNP Paribas acts to limit the emissions of greenhouse gasses from its loan portfolios. The Group has also made strong commitments based on the International Energy Agency's "Net-zero 2050" scenario for sectors with the highest emissions. You can see at a glance how we have advanced with the three sectors announced in 2022 (oil & gas, power generation and automotive) as well as the Group's 2023 commitments for three new sectors: steel, aluminium and cement.

IN 2050

our objective is to have contributed to the emergence of a carbon neutral economy, in line with the Paris Agreement and our commitments as a member of the Net-Zero Banking Alliance
